

Understanding Anbox Cloud Streaming Stack

- Client**
Customer provided client using Gateway API and WebRTC API. See Gateway Dev UI for an example.
- Gateway**
Finds best machines for user based on availability and geolocation. Manages sessions (chatrooms) between user and instance.
- AMS**
Manages application and orchestrates instances.
- Agent**
Secure middleware between the Gateway and AMS
- NATS**
Messaging queue between components Enables communication in HA and accross regions.
- STUN / TURN**
Provides functionality for WebRTC peers to deal with NATs.

Creating a stream-enabled instance
